                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              27-SEP-2000;
               The invention relates to isolated nucleic acid molecules and their encoded secreted proteins. The nucleic acids and proteins are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosain a pathological condition or susceptibility to a pathological condition. Antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in diagnostic immunosasays e.g. radioimmunosasays or enzyme linked immunosasays e.g. radioimmunosasays or enzyme linked immunosasays (ELISA). Disorders which are diagnosed or treated immunosorbant assays (ELISA). Disorders which are diagnosed or treated clarificative disorders e.g. rhoumatoid arthritis, hyperproliferative disorders e.g. cardiac arrest, cerebrovascular disorders e.g. oneoplasms of the breast or liver.

Alzheimer's disease, infections caused by bacteria, viruses and fungi and ocular disorders e.g. corneal infection, and many other disorders listed in the specification. The polypetides can also be used 'to aid wound healing and epithelial cell proliferation, to prevent skin adian due to subburn. to maintain orans before
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; immunosuppressive; antiarthritic; ss; antirheumatic; cardiant; vasotropic; cerebroprotective; nootropic; cerebroprotective; nootropic; nutbecterial; vituoide; fungicide; opthalmalogical; vulnerary; secreted protein; rheumatoid arthritis; hyperproliferative disorder; cardiovascular disorder; cardiac arrest; cerebran disorder; nordensis; nervous system disorder; Alzhelmer's disease; infection; ocular disorder; corneal infection; ocular disorder; skin ageling; epithelial cell proliferation;
                                                                                                                                                                                                                                                New nucleic acid molecules encoding 461 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions and used as food additives or preservatives .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       nseq
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be use a food additive or preservative to increase or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactors and other nutritional components. The present sequence encodes a novel secreted protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

(HUMA-) HUMAN GENOME SCI INC

```
The invention relates to isolated nucleic acid molecules and their encoded secreted proteins. The nucleic acids and proteins are used to prevent, treat or ameliozet a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition. Antibodies to the proteins can also. They are also used in alleviating symptoms associated with the disorders and in diagnostic immunoassays eg. radioimmunoassays or enzyme linked immunoassays (ELISA). Disorders which are diagnosed or treated immunosorbant assays (ELISA). Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, created autoimmune diseases e.g. rheumatoid arthritis, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. corneal infection, and many other of sorders listed in the specification. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before can expend this aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to creamate tissues and in chemctaxis. The polypeptides can also be used as food additive or preverview to increase or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, minerals, cofactors and other nutritional components. The present esquence encodes a novel secreted protein of the invention.
                                                                                     New nucleic acid molecules encoding 461 human secreted proteins for diagnosing, preventing, treating or ameliorating medical conditions and used as food additives or preservatives - \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

29-SEP-2000;
The present sequence is the largest open reading frame of the human cb. SL. cDNA (AAA27027) which encodes the human protein cbl.SL. cbl.SL. (1s believed to play a role in the regulation of a cell's growth, cf. sepleted to play a role in the regulation of a cell's growth, cf. sepleted to patients with certain types of cancer. The sequence was soldered found in patients with certain types of cancer. The sequence was soldered by screening a human pancreatic adenocarcinoma cDNA ilbrary using the insert of i.M.A.G. E clone iD 526956 from ATCC. Individual cDNA clones were subjected to 3-4 rounds of amplification and purification and several inserts were sequenced. The sequence of the resulting cbl-SL clones were subjected to 3-4 rounds of amplification and purification and several inserts were sequenced. The sequence of a clones were subjected to 3-4 rounds of amplification and purification cc and sequence may be used to screen for the presence of a carcinoma in a subject by comparing the cbl-SL DNA or mRNA sequence in the test sample to the cbl-SL DNA or mRNA of a control sample. Levels of construction of a cbl-SL DNA or mRNA of a control sample. Levels of construction of a cbl-SL pan or mRNA of a control sample. Cc study cbl-SL activity. cbl-SL panel using PRR and Northern blotting. The construction of a cbl-SL gene knockout in cells and animals used to screen peptide binding partners of the cbl-SL protein. These can be used for screening assays, for purification protocols and for interfering construction of a checkly with the functioning of cbl-SL. The protein may also minant chl-sc. Cc be administered as a therapeutic agent to cancer patients expressing a minant chl-sc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ô

The invention relates to isolated nucleic acid molecules and their cocced secreted proteins. The nucleic acids and proteins are used to provent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. They muse, mice, crabbits, goats, horses, cats, dogs, chickens or sheep. They are also used in diagnosing a pathological condition. Antibodies to the proteins can also be used in alleviating symptoms associated with the disorders and in diagnostic immunoassays e.g. radioimmunoassays or enzyme linked immunosorbant assays (ELISA). Disorders which are diagnosed or treated immunosorbant assays (ELISA). Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis.

Conclude autoimmune diseases e.g. rependance of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. corneal infection, and many other of disorders e.g. corneal infection, and many other consisted in the specification. The polypetides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to subburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to creame a food additive or preservative to increase or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, cofactors and other nutritional components. The present escape or preservative to increase or decrease storage capabilities, fat content, lipid, protein, carbohydrate, vitamins, cogequence encodes a novel secreted protein of the invention.

The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, hemmatopolesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity, inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Note: Records for SEQ ID NO 2110 (AAK52581), 2111 (AAK52582) and 3666 (AAM80020) are omitted as the relevant pages from the sequence listing
                                                                                                                                                                                                                                     Nucleic acids encoding polypeptides with cytokine-like activities,

                                                                                                                                                                                                                                                                                                                                                   encoded polypeptides (AAM78323-AAM880302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polymeredides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopolesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and

Novel nucleic acids encoding cbl-SL proteins useful for treating cancers expressing a mutant cbl-SL polypeptide

Claim 2; Page 67-69; 77pp; English.

The present sequence encodes the numan process to a cell's growth, differentiation and proliferation. Aberrant expression levels and mutant offerms of tyrostime kinases which are the likely targets of cols. Lave been found in patients with certain types of cancer. The sequence was been found in patients with certain types of cancer. The sequence was solated by screening a human pancreatic adenocarcinoma cDNA library using the inserts of I.M.A.G. E clone ID 526956 from ATCC. Individual CDNA clones were subjected to 3-4 rounds of amplification and purification and several inserts were sequenced. The sequence of the resulting cbl-SL cull-length clone was confirmed on more independent clones. The nucleic acid sequence may be used to screen for the presence of a carcinoma in a subject by comparing the cbl-SL DNA or mRNA sequence in the test sample to the cbl-SL DNA or mRNA of a control sample. Levels of cbl-I expression may be measured using prof and nother blotting. The construction of a cbl-SL general in cells and animals used to study cbl-SL activity. cbl-SL polypeptides can be used to screen peptide libraries, including phage display libraries, to identify and select or screening assays, for purification protein may also coll-SL protein. These can be used for interfering directly with the functioning of cbl-SL. The protein may also be administered as a therapeutic agent to cancer patients expressing a The present sequence encodes the human protein cbl-SL, which is

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
